
Job description

Full Stack Software Engineer

Location: London - Hybrid work from home

Salary: £40k-£55k

Contract Basis: Permanent, Full-Time

Timeframe: Applications by 08/10/2021 – to start as soon as possible.

Summary

Orbit Energy are a rapidly growing consumer energy supplier based in London with an ambition to challenge the norm and empower people to make better energy choices.

Orbit are looking to grow their internal Technology team to encompass support, automation, data quality and software development. We're looking for an awesome Software Engineer to join the team.

The Role

As the Full Stack Software Engineer, you will be part of the team delivering our customer facing services and back-office automation systems. You'll build awesome customer journeys across many channels. You will be comfortable developing both front-end web interfaces using HTML5, CSS3, Javascript with client-side frameworks and back-end server technologies such as PHP, again with modern framework experience (Laravel, Symfony etc). Drupal experience would also be helpful.

You will be documenting your code to a high standard, as well as building test plans to ensure quality.

Key Skills and Experience

- Technical Background - a degree in a technology, science, mathematics, or engineering – or relevant technology work experience
- PHP, Laravel or Symfony frameworks
- Javascript (TypeScript, React, VUE)
- HTML5, CSS3
- SQL, MongoDB
- Building and Consuming RESTful APIs
- Great troubleshooting skills
- Effective time management, able to work within specified time constraints
- Comfortable working within a fast-paced environment
- Excellent interpersonal, written & verbal communication skills

Desirable but not required

- Gentrack Junifer, Utiligroup AFMS/USmart experience
- Python (3.7+), Flask, Pandas
- Energy Industry experience
- Building comprehensive test plans
- Drupal experience

STRICTLY NO RECRUITERS OR AGENCIES.
